

specifications

The rack mount fiber tray and fiber adapter patch panels shall house, organize, manage and protect fiber optic cable, splices, and connectors. Available in both flat and angled versions, patch panels shall accommodate all Panduit pre-terminated MTP* cassettes, fiber adapter panels (FAP), fiber mount panels (FMP), associated trunk cables, connectors, patch cords, and shall include integral cable management. Fiber trays shall be constructed of steel material. Steel cover shall be removable for cabling and connector access during installation. Enclosure shall have multiple knockouts for a variety of trunk cable entry points.

Mounting:	Integral mounting flange for installation in 19" wide EIA-310 racks
Accessories:	Mounting hardware and accessory kit with labels included

key features and benefits

Works with all Panduit® Opticom® Fiber Optic Cassettes and Fiber Adapter Panels	Provides versatility and flexibility with a fully modular solution for a variety of pre-terminated installations, FAP and field termination, and splicing installations. Works with all Panduit LC, SC, ST, MT-RJ and MTP* fiber adapter panels and cassettes
Provides higher patch field density in fewer rack units saving valuable space	Modular design mounts up to four Opticom® Cassettes or FAP's per RU and up to three Opticom® Cassettes per RU for the angled fiber optic trays
Angled design	Angled design allows cable to flow to each side of the rack: patch cords can be routed directly into vertical cable managers
Fiber optic splice module	Can fusion splice up to 96 fibers per RU in a single enclosure with one-to-one splice-to-patching ratio
Side and rear cable entry	Provides installer with several options to route cable within the tray
Patch panel mounting	Hardware provided to allow patch panel to be pre-assembled before mounting to rack

applications

Opticom® Rack Mount Fiber Trays and Fiber Adapter Patch Panels provide a flexible and modular system for managing fiber termination, connections, and patching for all applications and offer the industry's highest patch field density and fiber counts for all fiber termination methods. Angled fiber optic patch

panels facilitate proper bend radius of each patch cord as it is routed directly into a vertical cable manager, eliminating the need for horizontal cable managers. The high capacity, high-density solution maximizes rack space utilization and reduces floor space requirements for lower overall system costs.
