Quick Start Guide

TERMS OF USE: Ubiquiti radio devices must be professionally installed. Shielded Ethernet cable and earth grounding must be used as conditions of product warranty. TOUGHCable™ is designed for outdoor installations. It is the professional installer's responsibility to follow local country regulations, including operation within legal frequency channels, output power, and Dynamic Frequency Selection (DFS) requirements.

Installation Requirements

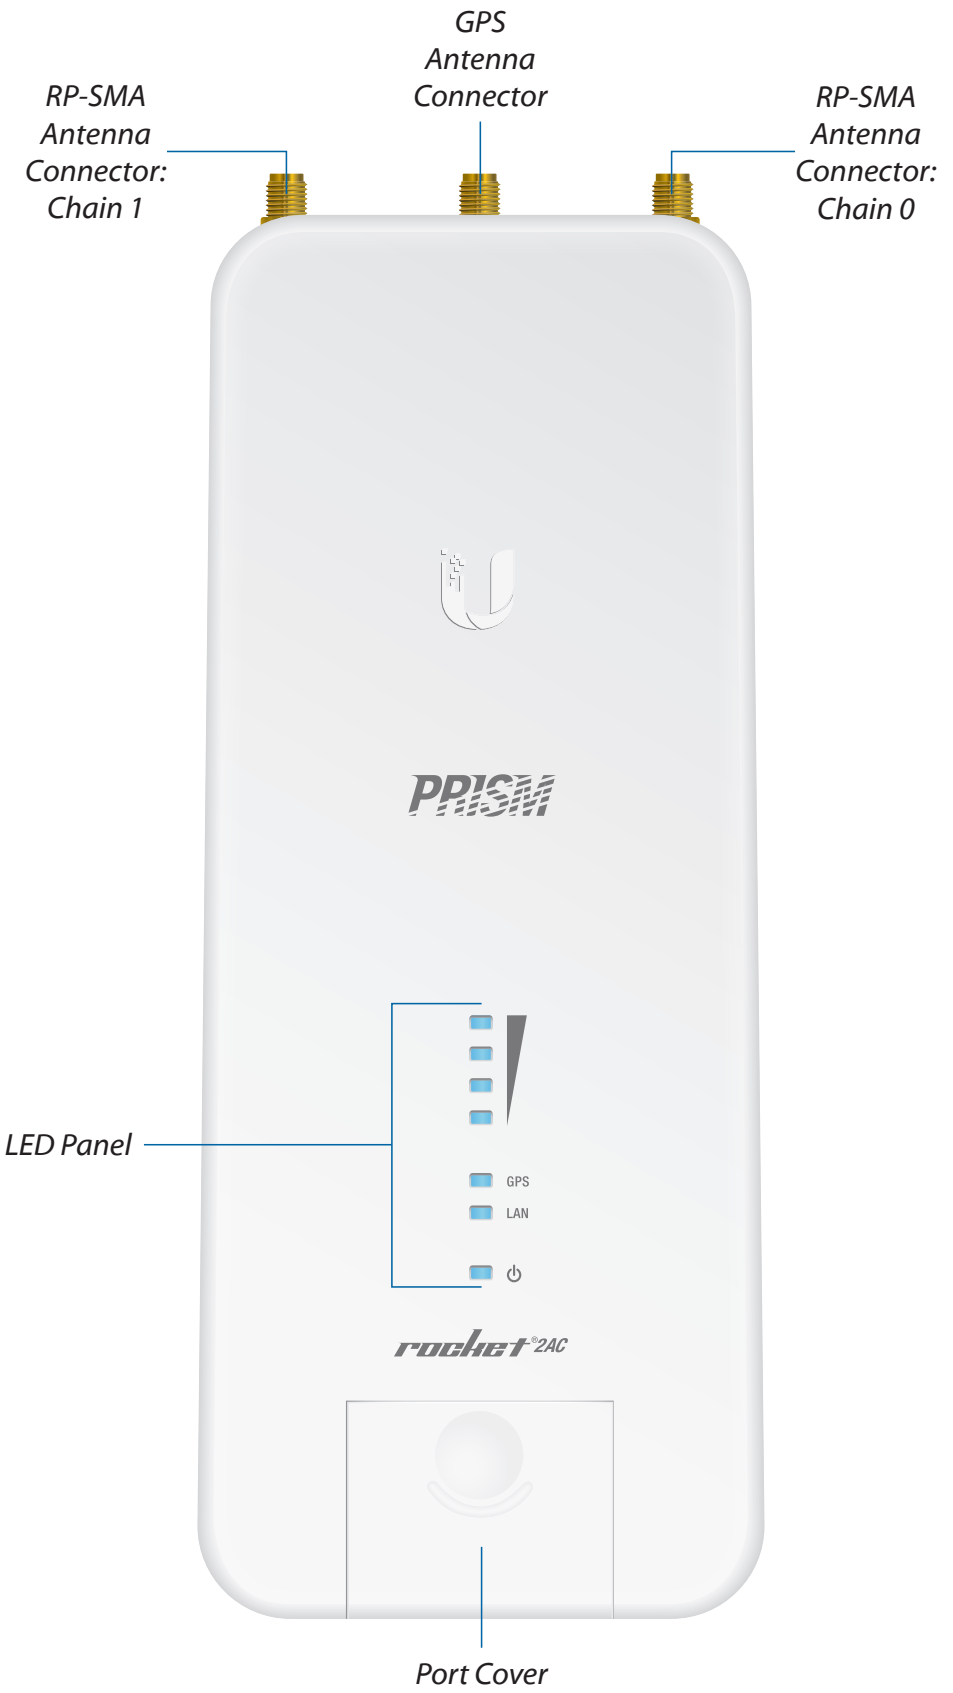

- The *GPS Antenna* needs to have clear line of sight to the sky for proper GPS operation.
- Shielded Category 5 (or above) cabling with drain wire should be used for all outdoor wired Ethernet connections and should be grounded through the AC ground of the PoE.

  We recommend that you protect your networks from harmful outdoor environments and destructive ESD events with industrial-grade, shielded Ethernet cable from Ubiquiti Networks. For more details, visit **www.ubnt.com/toughcable**
- Surge protection should be used for all outdoor installations. We recommend that you use two Ethernet Surge Protectors, model ETH-SP, one near the Rocket and the other at the entry point to the building. The ETH-SP will absorb power surges and safely discharge them into the ground.

* Shown without the antenna.

Hardware Overview

LED Panel

Signal In airOS®, you can modify the wireless signal strength threshold values for each LED on the *Wireless* tab under *Signal LED Thresholds*. The default values are shown below:

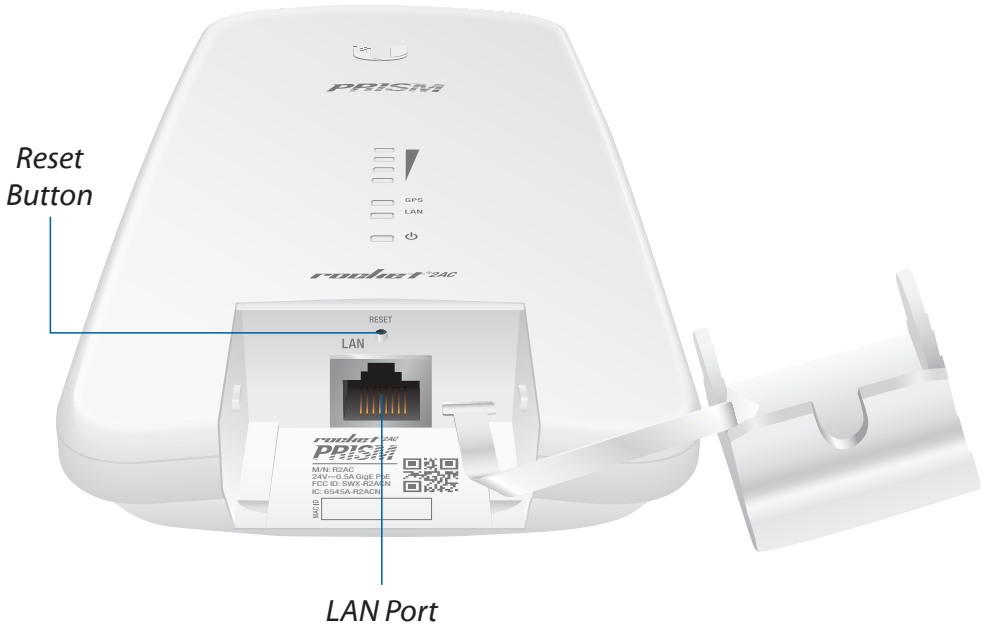

- LED will light blue when the wireless signal strength is above -65 dBm.
- LED will light blue when the wireless signal strength is above -73 dBm.
- LED will light blue when the wireless signal strength is above -80 dBm.
- LED will light blue when the wireless signal strength is above -94 dBm.

GPS **GPS** The GPS LED will light steady blue when the GPS signal strength is sufficient. This requires a minimum of three satellite connections.

LAN **LAN** The LAN LED will light steady blue when an active Ethernet connection is made to the *LAN* port and flash when there is activity.

Power The Power LED will light blue when the device is connected to a power source.

Ports

LAN The Gigabit Ethernet port is used to connect the power and should be connected to the LAN.

Reset Button To reset to factory defaults, press and hold the *Reset* button for more than 10 seconds while the Rocket is already powered on. Alternatively, the Rocket may be reset remotely via a *Reset* button located on the bottom of the *Gigabit PoE* adapter.

Hardware Installation

The Rocket Prism is designed to mount directly onto a Ubiquiti airMAX RocketDish™ antenna for Point-to-Point use or an airMAX Sector antenna for Point-to-MultiPoint use.

1. Lift the release latch on the bottom of the Rocket and slide the *Port Cover* off.

2. Connect an Ethernet cable to the *LAN* port.

3. Replace the *Port Cover*.

4. Connect the RF cables (included with the antenna) to the *RP-SMA Connectors* located on top of the Rocket.

   Skip this step if you are using the RocketDish RD-2G24.

5. Attach the Rocket to an antenna. Align the mounting tabs on the back of the Rocket with the four mounting slots on the antenna. Slide the Rocket down until it locks into place.

Connecting to the PoE Adapter

1. Connect the Ethernet cable from the Rocket to the **POE** port of the *PoE Adapter.*
2. Connect an Ethernet cable from your LAN to the **LAN** port of the *PoE Adapter.*
3. Connect the *Power Cord* to the adapter's power port. Connect the other end of the *Power Cord* to a power outlet.

Mounting the PoE Adapter (Optional)

1. Remove the *PoE Mounting Bracket* from the adapter, place the bracket at the desired location, and mark the two holes.
2. Pre-drill the holes if necessary, and secure the bracket using two fasteners (not included).
3. Align the adapter's slots with the tabs of the *PoE Mounting Bracket*, and then slide the adapter down.

Accessing airOS via Wi-Fi
