DualSpa™

CPAP Nasal Mask

HSINER®

Touching lives, Improving life.

The pause of flow of air intake while sleeping is called as "sleep apnea". This sleeping disorder makes the patient miss one or two breaths while he is asleep. This cycle continues frequently, making the person wake up completely and thereby disrupting the sleep pattern.

Understanding the working principle of the CPAP masks will help you to choose the best comfortable machine for overcoming the sleeping problem. Wearing the CPAP masks during sleep can make people feel uncomfortable, especially if the mask is bulky, hard, heavy, and noisy or causes skin irritation. People using the CPAP masks face five main problems such as air leakage, pressure from headgear, limited sleep positions, skin irritation and noise. However, thankfully, with HSINER's advancements in CPAP mask, all these difficulties have been overcome.

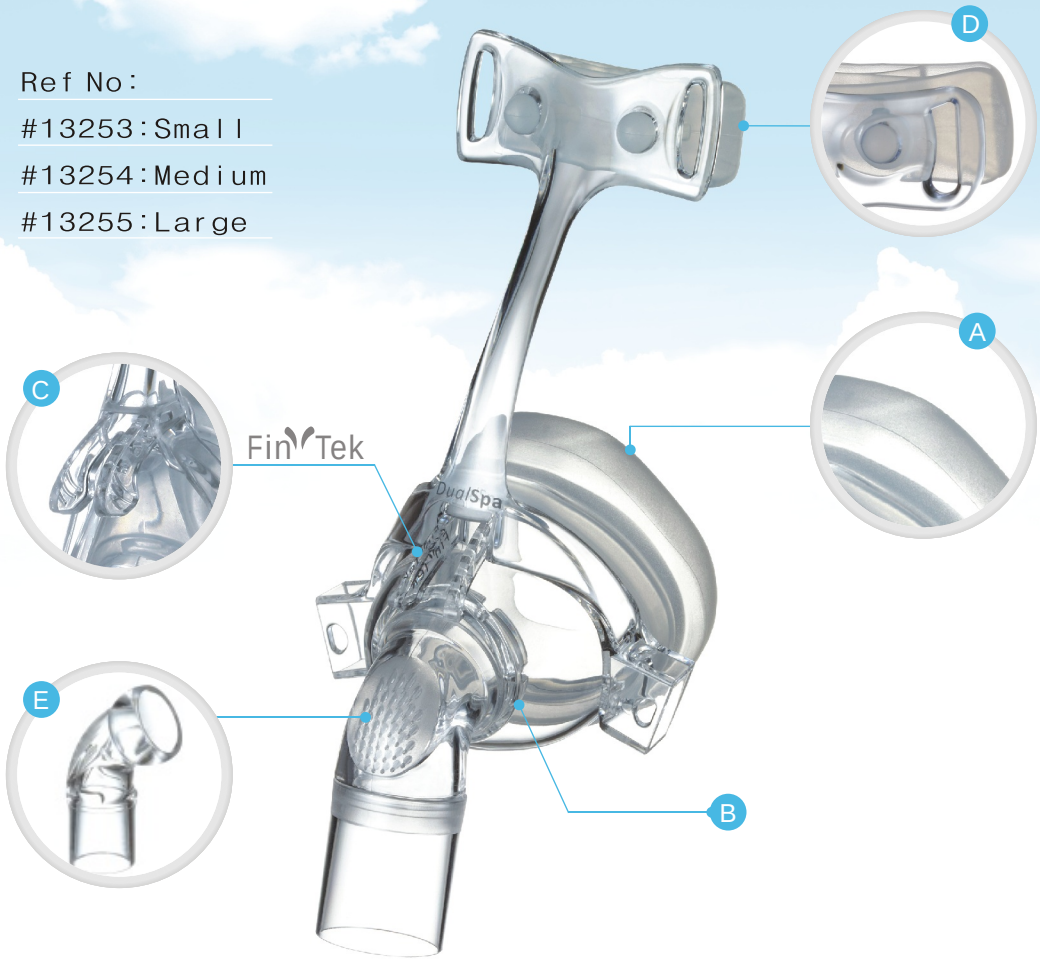

DualSpa™ CPAP Nasal Mask

Ref No:

#13253:Small

#13254:Medium

#13255:Large

A New 3D mask cushion provides an excellent seal without tight headgear; the face pressure sores and discomfort won't happen.

B Just a simple action to attach and detach the cushion from frame.

C FinTek >> Innovative adjustable forehead support provides stability with easy one-handed adjustment and allows the mask fit most of patients.

D Flexible, one-piece forehead pad evenly conforms to the forehead contour, so the pad stays in place and you won't feel a thing.

E 360°rotational ball in elbow .
